Office Action Summary							
	Examin r	Art Unit					
The MAN INC DATE of this communication and	Esaw T-Abraham	2133					
Th MAILING DATE of this communication appears on the cover she twith the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1) Responsive to communication(s) filed on 04 Oc)⊠ Responsive to communication(s) filed on <u>04 October 2004</u> .						
· <u>-</u>	3) Since this application is in condition for allowance except for formal matters, prosecution as to the ments is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
,							
Disposition of Claims							
4)⊠ Claim(s) <u>1-5 and 7-12</u> is/are pending in the application.							
	4a) Of the above claim(s) is/are withdrawn from consideration.						
	Claim(s) is/are allowed. Claim(s) <u>1-5 and 7-12</u> is/are rejected.						
<u> </u>							
7) Claim(s) is/are objected to.

Final rejection

Response to the applicant's argument

The applicant argues that the prior art (Lerzer) does not teach the equations (equations 33 and 37) in claims 1, 3, and 10. However, this argument goes to subject matter, i.e., the equations in claims 1, 3, and 10 are not disclosed in the specification. Therefore, the examiner would like to point out that this action is made final.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

1. Claims 1-5 and 7-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The equation for calculating log likelihood ratio (L_k) as in claims 1, 3, and 10 are not disclosed in the specification.

Claims 2, 4, 7-9, 11 and 12 which are directly and indirectly dependents of claims 1, 3 and 10 are also rejected under 35 U.S.C. 112, first paragraph.

Claim Rejections - 35 USC § 103

Art Unit: 2133

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lerzer (U.S. PN: 6,343,368).

As per claims 1, 3 and 10, Lerzer teaches or discloses an error correction codes using maximum a posteriori (MAP) decoding technique (see col. 1, lines 15-17). Lerzer in figure 6 teaches a branch metric calculation unit (BTMC) (22) for calculating branch metric calculation and for receiving symbols (see the inputs coupled to the BTMC unit), a state metric calculation unit (RSMC) (82) for calculating a reverse state metric and storing the branch metric in a storage unit (RSM) (38), and a log likelihood ratio calculation unit (LRC) (28) for calculating likelihood ratio by receiving the forward state metric and reading the reverse state metric saved at the storage unit (38). Lerzer does not explicitly teach a turbo decoding. However, Lerzer teaches that the processes described above may be used to decode turbo coded received signal sequences,

Art Unit: 2133

wherein the likelihood ratios are calculated for a sequence prior to any hard decisions being made regarding received symbol values (see col. 11, lines 9-20). Therefore, it would have been obvious to a person having an ordinary skill in the art at the time the invention was made to perform turbo decoding in the system of Lerzer as taught by Lerzer. This modification would have been obvious because a person having ordinary skill in the art would have been motivated to do so because turbo code decoding is known in the art to be implemented in a MAP (maximum posteriori probability) to generate a posteriori probability estimates of the information bits that have been encoded into the code word.

As per claim 2, Lerzer teaches all the subject matter claimed in claim 1 including a forward and reverse state metric calculations according to branch metrics (see claim 1).

As per claims 4 and 7, Lerzer teaches all the subject matter claimed in claim 3 including Lerzer teaches four steps; for example one of the steps is reverse state metric calculations of MAP log algorithm including equations for calculating the reverse state metric (see col. 5, lines 20-27) and further Lerzer teaches BTMC unit supplies a branch transition metric to the FSMC (forward state metric) unit and the RSMC (reverse state metric) unit and the inputs to the single BTMC will also need to switch between those needed to calculate the branch metrics from the beginning of the sequence trellis and those needed to calculate the branch metrics from the end of the sequence trellis (see col. 9 last paragraph).

As per claims 5 and 8, Lerzer teaches all the subject matter claimed in claim 3 including Lerzer teaches four steps; for example one of the steps is forward state metric calculations of MAP log algorithm including equations for calculating the forward state metric (see col. 5, lines 10-17) and further Lerzer teaches BTMC unit supplies a branch transition metric to the FSMC

Application/Control Number: 10/039,005

Art Unit: 2133

(forward state metric) unit and the RSMC (reverse state metric) unit and the inputs to the single BTMC will also need to switch between those needed to calculate the branch metrics from the beginning of the sequence trellis and those needed to calculate the branch metrics from the end of the sequence trellis (see col. 9 last paragraph).

As per claim 9, Lerzer teaches all the subject matter claimed in claim 3 including

Lerzer teaches four steps; for example one of the steps is likelihood ratio calculations of MAP

log algorithm including equations for calculating likelihood ratio (see col.5, lines 30-45) and

further Lerzer teaches BTMC unit supplies a branch transition metric to the FSMC (forward state

metric) unit and the RSMC (reverse state metric) unit and the inputs to the single BTMC will

also need to switch between those needed to calculate the branch metrics from the beginning of
the sequence trellis and those needed to calculate the branch metrics from the end of the
sequence trellis (see col. 9 last paragraph).

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Application/Control Number: 10/039,005

Art Unit: 2133

however, will the statutory period for reply expire later than SIX MONTHS from the date of this

final action.

Conclusion

Any inquiry concerning this communication or earlier communication from the examiner 3.

should be directed to Esaw Abraham whose telephone number is (571) 272-3812. The examiner

can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are successful, the examiner's supervisor,

Albert DeCady can be reached on (571) 272-2318. The fax phone numbers for the organization

where this application or proceeding is assigned are (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 305-3900.
